Noesis' experience in Logistics & Supply Chain

Footprint and innovation

European Airport

Improved Software Quality with an application
lifecycle management solution

The criticality of the airport services sector presumes a need to assure the fulfillment of due dates and the quality of the developed systems. Noesis delivered a **solution that guarantees quality in all the development phases of the software**. The implementation of the Jira Service Desk allowed to collect and centralize user requests, easing the communication with the entire system and allowing automatic status updates.

Dutch Logistics Group

Noesis developed three web applications
and two mobile apps in OutSystems

Noesis developed a flexible and straightforward platform for logistics administration systems that standardize managing goods throughout several locations worldwide. As a result, **this Dutch logistics group improved efficiency** between 75% and 90% within the logistical administrative processes, saving €865.000/year.

Belgium Rail Freight Operator

Increasing service quality and productivity
through an internal request management app

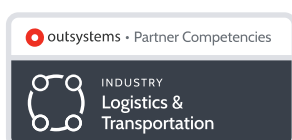

Developed in OutSystems, the Mobile Information Assistant allows a digital connection to our client's train wagon ERP system, digitalizing the checks needed for the train departure. As a result, **our client has increased safety, productivity, data quality, service quality, and reduced costs**.

Dutch Storage and Distribution Company

Fostering innovation and growth with a new
core system

To modernize our client's core system, Noesis built a **Master Data Management** in OutSystems, focused on automating orders, storage control, and chemical production processes. With this transformation, the company gained better control over production and other essential processes, with benefits such as process optimization, prevention, centralization, and a culture of innovation.
