

Digital Transformation Excellence

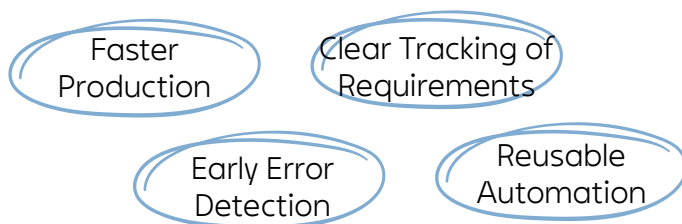

Quality Management for Your Core Systems Implementation

Noesis possesses extensive experience in quality management for core systems (such as ERP, CRM, etc.) implementations and upgrades.

Our Quality Assurance approach accelerates software delivery, spots and fixes errors early to avoid delays and additional costs maintains control over your project through precise tracking of requirements and test results and builds automation that speeds up the current project and aids in future updates.

Are you looking for a seamless digital transformation program?

SAP, SALESFORCE, ORACLE, and OutSystems are leading business support technologies in which the Noesis team actively collaborates with the program team. We contribute to developing and operating a comprehensive Strategic Quality Plan, ensuring smooth implementation and successful outcomes.

The inevitability of changes in legislation, technological advancements, and version updates underscores the importance of proactive preparation over merely anticipating their arrival.

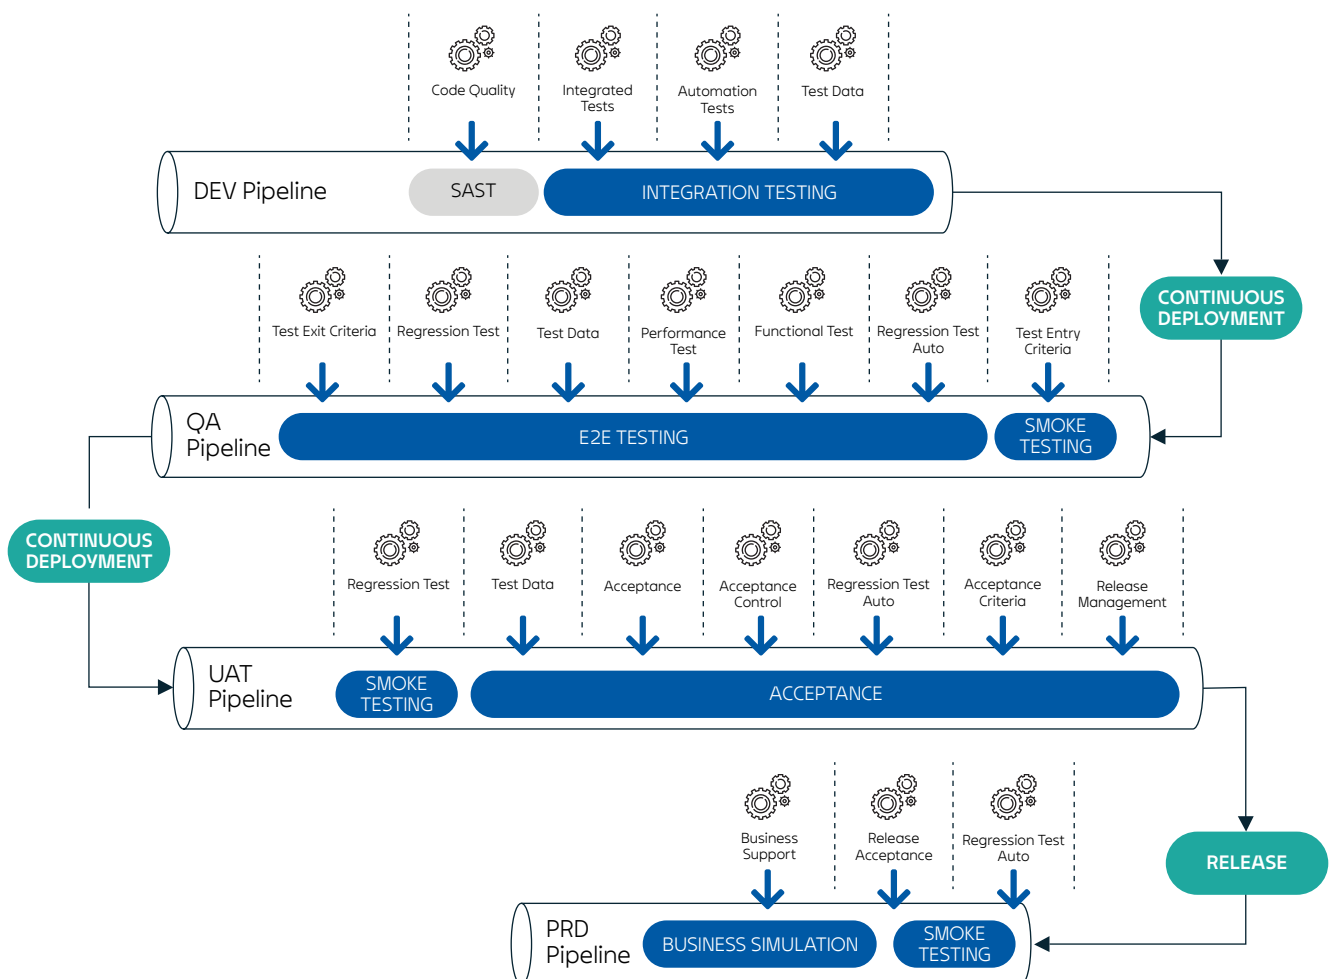

Formulating comprehensive quality standards and criteria becomes imperative to define performance, functionality, security, and usability benchmarks essential for the success of the transformation program. With DevOps principles in mind, Noesis streamlines the integration of continuous testing throughout the software development lifecycle (SDLC), covering integration testing, system testing, and user acceptance testing (UAT).

This method fosters early defect detection and ensures adherence to requirements at each developmental stage.

Noesis Quality management Approach

Quality | Speed | Efficiency | Security
