

TOP 8 CYBERSECURITY CAPABILITIES FOR IT LEADERS

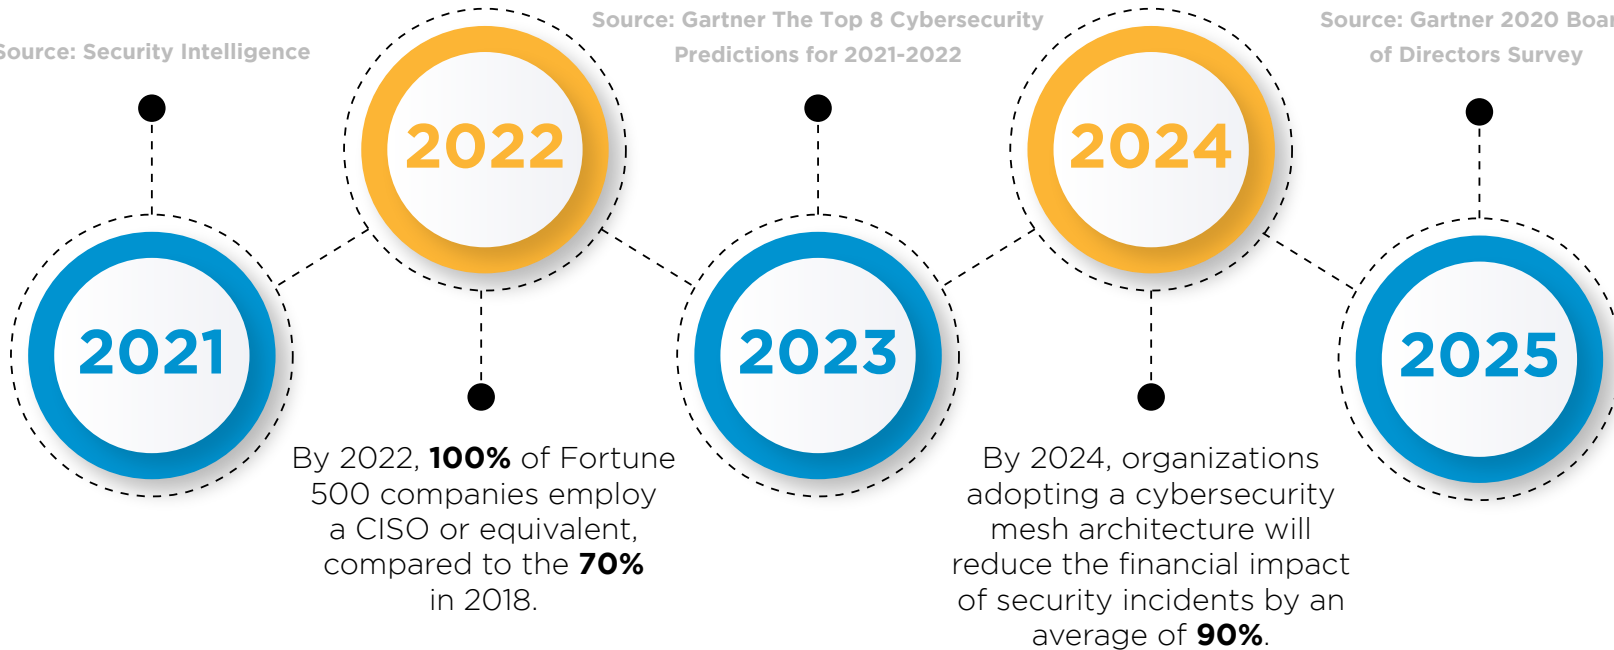

The guidelines and investment priorities to secure a resilient cybersecurity roadmap.

Cybersecurity: You've been warned!

2021 was a banner year for cyber attacks. Compared to 2020, last year saw a **50%** increase in attacks per week on corporate networks.

of Directors Survey

Cybersecurity outlook

The growing sophistication of cybercriminals, the exponential increase in their attacks, with higher complexity and diversity, and the evolution of attack techniques, pose new security challenges that traditional approaches are unable to address.

The current context poses a huge challenge to IT departments and has also been an impetus for a change not only in mentality, but also in prioritization and investment, when it comes to cybersecurity.

Nuno Cândido

Security by design

Key priority areas

Cybersecurity & Intelligent Monitoring

Cybersecurity & Intelligent monitoring tools must be implemented in order to safeguard the E2E IT perimeter against sophisticated internal and external attacks.

Key technologies

Network Security

Encryption of backups at rest. Automated patching. Segmentation of the network. Regular penetration testing.

Key technologies

Extended Detection and Response (XDR) / EDR

Extended Detection & Response (XDR) solution on all endpoints, servers, firewalls and other sources. If not possible, Endpoint Detection & Response (EDR) should be implemented on all servers.

Key technologies

Key priority areas

Backup & Recovery

Backups are stored off-site and offline, completely separated from your production environment.

Key technologies

COMMVAULT

VEEAM

Privileged Access Management (PAM)

A Privileged Access Management tool (PAM) is implemented to monitor and control accounts with privileged access to key assets in the IT estate.

Key technologies

thycotic

Identity and Access Management (IAM)

Identity and access management (IAM) is a framework of business processes, policies and technologies that facilitates the management of electronic or digital identities.

Key technologies

Microsoft

SailPoint

NetIQ

Key priority areas

Application Security Testing

Build on demand software resilience for modern development from an AppSec tool that delivers a holistic, inclusive, and extensible platform that supports the breadth of software portfolio.

Key technologies

Security Operations Center (SOC)

Vulnerability scans to all websites and external facing points. Tool for log review (SIEM). Log sources must include firewall, AD, EDR, Domain Controllers and others critical resources.

Key technologies

Time to define Your roadmap

Starting this cybersecurity roadmap may seem challenging, especially when doing it alone.

Make sure you get proper guidance and counseling to guarantee you start off on the right foot and scale in the right way.

Our expertise tells us that many companies are reacting ad-hoc and end up investing in a distributed way, solving specific needs but do not guarantee real-time holistic protection of organizations' data, email, applications, assets, and networks, from sophisticated attacks.

Would you like to know what's the right move for your business?
